

**DISTRIBUTED COMPUTATION IN UNTRUSTED COMPUTING
ENVIRONMENTS USING DISTRACTIVE COMPUTATIONAL UNITS**

Abstract of the Disclosure

5 An apparatus, program product and method initiate the execution of distractive computational units along with the execution of other computational units on an untrusted computer to inhibit the reconstitution of a computation by an untrusted party. In particular, along with partitioning a particular computation into a plurality of computational units, one or more distractive computational units are generated and supplied to one or more resource providers for execution along with those of the partitioned computation.
